

1. PROJECT STRUCTURE

event-booking-system/

2. BACKEND CODE (Node.js + Express)

server.js

```
const express = require("express");
const cors = require("cors");
const app = express();
app.use(cors());
app.use(express.json());
let events = [
  { id: 1, name: "Tech Fest", date: "2026-05-10", venue: "Auditorium" },
  { id: 2, name: "Seminar", date: "2026-05-15", venue: "Hall A" }
];
let bookings = [];
// Get Events
app.get("/events", (req, res) => {
  res.json(events);
});

// Add Event
app.post("/events", (req, res) => {
  events.push(req.body);
});
```

```
    res.send("Event Added");
  });

// Delete Event
app.delete("/events/:id", (req, res) => {
  events = events.filter(e => e.id !== req.params.id);
  res.send("Deleted");
});

// Booking
app.post("/book", (req, res) => {
  bookings.push(req.body);
  res.send("Booked Successfully");
});

// Get Bookings
app.get("/bookings", (req, res) => {
  res.json(bookings);
});
app.listen(5000, () => console.log("Server running on port 5000"));
```

3. FRONTEND CODE (React)

index.js

```
import React from "react";
import ReactDOM from "react-dom/client";
import App from "./App";
const root = ReactDOM.createRoot(document.getElementById("root"));
root.render(<App />);
```

App.js

```
import React, { useState } from "react";
import EventList from "./components/EventList";
import BookingForm from "./components/BookingForm";
import Payment from "./components/Payment";
import Confirmation from "./components/Confirmation";
import AdminPanel from "./components/AdminPanel";
function App() {
```

```

const [page, setPage] = useState("home");
const [bookingData, setBookingData] = useState({});
return (
  <div>
    <h1>Event Booking System</h1>
    {page === "home" && (
      <EventList setPage={setPage} setBookingData={setBookingData} />
    )}

    {page === "booking" && (
      <BookingForm setPage={setPage} setBookingData={setBookingData} />
    )}

    {page === "payment" && (
      <Payment setPage={setPage} bookingData={bookingData} />
    )}

    {page === "confirmation" && <Confirmation bookingData={bookingData} />}
  </div>
);
}
export default App;

```

4. COMPONENTS

EventList.js

```

import React, { useEffect, useState } from "react";
import axios from "axios";
function EventList({ setPage, setBookingData }) {
  const [events, setEvents] = useState([]);
  useEffect(() => {
    axios.get("http://localhost:5000/events")
      .then(res => setEvents(res.data));
  }, []);
  return (
    <div>

```

```

    <h2>Events</h2>
    {events.map(e => (
      <div key={e.id}>
        <h3>{e.name}</h3>
        <p>{e.date} | {e.venue}</p>
        <button onClick={() => {
          setBookingData({ event: e });
          setPage("booking");
        }}>
          Book Ticket
        </button>
      </div>
    ))}
  </div>
);
}
export default EventList;

```

BookingForm.js

```

import React, { useState } from "react";

function BookingForm({ setPage, setBookingData }) {
  const [name, setName] = useState("");
  const [email, setEmail] = useState("");

  const handleSubmit = () => {
    setBookingData(prev => ({ ...prev, name, email }));
    setPage("payment");
  };

  return (
    <div>
      <h2>Enter Details</h2>
      <input placeholder="Name" onChange={e => setName(e.target.value)} />
      <input placeholder="Email" onChange={e => setEmail(e.target.value)} />
      <button onClick={handleSubmit}>Proceed to Payment</button>
    </div>
  );
}

```

```
}
```

```
export default BookingForm;
```

Payment.js

```
import React from "react";
```

```
import axios from "axios";
```

```
function Payment({ setPage, bookingData }) {
```

```
  const handlePayment = () => {
    axios.post("http://localhost:5000/book", bookingData)
      .then(() => {
        alert("Payment Successful!");
        setPage("confirmation");
      });
  };
};
```

```
  return (
    <div>
      <h2>Payment Page</h2>
      <input placeholder="Card Number" />
      <button onClick={handlePayment}>Pay</button>
    </div>
  );
}
```

```
export default Payment;
```

Confirmation.js

```
import React from "react";
```

```
function Confirmation({ bookingData }) {
```

```
  return (
    <div>
      <h2>Booking Confirmed</h2>
      <p>Name: {bookingData.name}</p>
    </div>
  );
}
```

```

    <p>Event: {bookingData.event?.name}</p>
  </div>
);
}

```

```
export default Confirmation;
```

AdminPanel.js

```

import React, { useState } from "react";
import axios from "axios";

function AdminPanel() {
  const [event, setEvent] = useState({
    id: "",
    name: "",
    date: "",
    venue: ""
  });

  const addEvent = () => {
    axios.post("http://localhost:5000/events", event)
      .then(() => alert("Event Added"));
  };

  return (
    <div>
      <h2>Admin Panel</h2>

      <input placeholder="ID" onChange={e => setEvent({...event, id:
e.target.value}}) />
      <input placeholder="Name" onChange={e => setEvent({...event, name:
e.target.value}}) />
      <input placeholder="Date" onChange={e => setEvent({...event, date:
e.target.value}}) />
      <input placeholder="Venue" onChange={e => setEvent({...event, venue:
e.target.value}}) />

      <button onClick={addEvent}>Add Event</button>
    </div>
  );
}

```

```
    </div>
  );
}

export default AdminPanel;
```

5. INSTALLATION

Backend

```
cd backend
npm init -y
npm install express cors
node server.js
```

Frontend

```
npx create-react-app frontend
cd frontend
npm install axios
npm start
```
